Mayank Dabas

B.Tech + M.Tech, AI & ML | Python, TypeScript | Full-stack, applied AI and security tooling

Delhi, India | montidabas6@gmail.com | github.com/Mayank32935M | linkedin.com/in/mayankdabas-64131b2ba

SUMMARY

First-year AI & ML student who learns by shipping. Built a tamper-evident digital forensics platform, an AI insurance-gap advisor with Hindi voice, and is co-building an IDE in Rust. Hands-on with LLM APIs, agentic workflows and automation. Seeking AI/ML, backend or security internships.

EDUCATION

Guru Gobind Singh Indraprastha University (GGSIPU) Aug 2026 – Present

University School of Automation and Robotics (USAR) — B.Tech + M.Tech Dual Degree, Artificial Intelligence & Machine Learning

PROJECTS

FORENSIC-X — Verifiable Digital Forensics Framework (GitHub) SUTRAM 2026

Python, FastAPI, React 19, TypeScript, Tailwind CSS, SQLite, pytest

- Built a full-stack forensics platform: FastAPI backend with async SQLAlchemy and a React 19 + TypeScript dashboard for evidence, timelines and case management.
- Implemented an immutable on-disk evidence store (read-only artifacts) and a SHA-256 hash-chained custody ledger: every record links to the previous record's hash, so any database tampering breaks the chain.
- Wrote a timeline engine that normalizes syslog, auth.log and CSV logs into ISO 8601 UTC; designed a three-tier model separating verified facts, inferences and hypotheses (documented in ADRs).
- Added unit tests for hashing and custody tamper-resistance; now porting the app to a native desktop build with Tauri.

Suraksha Sense — AI Insurance Gap Advisor (GitHub) 2026

Paytm Build for India AI Hackathon (Delhi Edition), Track 2 · React, Node.js, Express, Gemini API, Sarvam AI

- Built an AI app that detects life events (marriage, a baby, a new vehicle), maps them to insurance coverage gaps, and scores a policy's trustworthiness from 0–100.
- Integrated Gemini for analysis and Sarvam AI for a Hindi voice response; added server-side validators for AI output and a no-personal-data, no-storage privacy design.

Stivium — IDE built from scratch (GitHub) In development

Rust, Tauri, TypeScript, Tailwind CSS · Duo project with Aditya Bhatnagar

- Co-building a desktop IDE with a Rust core and a TypeScript + Tailwind frontend.

REDZONE and EventTwin — Smart India Hackathon 2026 (Team INDRI) SIH 2026

- **REDZONE:** decision-support tool for flood and erosion relocation in Assam. Led frontend design and impact strategy, and pitched to judges; team cleared Round 2 of internal selection.
- **EventTwin:** crowd-flow digital twin for campus events. Handled UI selection and impact strategy.

EXPERIENCE

Freelance AI Builder, Web and Video Remote

Local businesses and Instagram pages

- Deliver web and video work for local businesses and Instagram pages, editing in DaVinci Resolve and CapCut with AI video tools (Kling, Higgsfield).
- Build n8n automation pipelines and LLM-based workflows (Claude and Gemini APIs) that connect AI to real data.

Kalyan Classes — CBSE English Delhi

Curriculum Creator & Tutor

- Created and taught CBSE English curriculum for students in Classes 6–10.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS · Learning: Rust, C, Java

Frameworks: FastAPI, React, Vite, Node.js/Express, Tailwind CSS, Tauri

AI & Automation: Claude API, Gemini API, Sarvam AI, agentic workflows (ReAct, orchestrator/subagent), MCP, n8n

Tools: Git/GitHub, VS Code, pytest, Kali Linux, PowerShell, Vercel, Google Cloud, Google Stitch

Media: DaVinci Resolve, CapCut, Canva
